Department of Works and Engineering

Prospect Pump Station, Fort Hill Road Devonshire
Project No. 41/188/1/75

Scope of Works

1.0 BACKGROUND

There is a need for a pump station which will distribute water from the reservoirs at Fort Prospect into 5 major water distribution mains serving the central and eastern Parishes of Bermuda.

In addition to the works to construct a new pump station the works include the installation of backup power for the pump station in times of power outages using a mobile 125Kw power Generator provided by the owner.

2.0 SCOPE OF WORK

The scope of the work detailed on the contract drawings includes:

1. Excavation & site works to construct a new pump station building;
2. Construction of new pump station building;
3. Mechanical works to install an owner supplied pump package;
4. Pipeline works including trench works as required to connect new pump package to owner installed pipework
5. Electrical works to provide power to the new pump station with switch facilities to connect standby power generator (125kw). Generator supplied by owner.
6. Works to include underground electrical duct work installation as required.
7. Site works and Landscaping to complete the site as shown
8. Assist with the commissioning of the new station as necessary; and
9. Prepare as built documents.
